Harshini Meghana Kotha

Aspiring Software Development Engineer | Data Science Undergraduate
+91 63019 90869| your.email@example.com | LinkedIn | GitHub | Portfolio

Professional Summary

Aspiring Software Development Engineer pursuing a B.Tech in Data Science at SRM University–Andhra Pradesh. Hands-on project experience developing Python-based applications across text-to-speech systems, backend development, computer vision, and machine learning. Familiar with FastAPI, Streamlit, OpenCV, NumPy, Pandas, data preprocessing, classification, database management, and Git-based collaboration.

Education

SRM University–Andhra Pradesh *2024 – 2028*
B.Tech in Data Science *Expected Graduation: 2028*

Fitzee, Vijayawada, Andhra Pradesh *2022 – 2024*
Class XII – Senior Secondary Education

Fitzee, Vijayawada, Andhra Pradesh *2021 – 2022*
Class X – Secondary Education

Experience & Leadership

Event Coordinator – University Events
SRM University–Andhra Pradesh (SRM AP)

- Coordinated technical and cultural events by organizing logistics, registrations, schedules, and participant communication to support smooth event delivery.
- Collaborated with faculty members and student volunteers to manage multiple tasks and contribute to a positive participant experience.

Technical Skills

Programming Languages: C, C++, Python, Java, JavaScript
Web & Backend: HTML, CSS, Node.js, Flask, FastAPI, REST APIs, WebSockets
Databases: MySQL, Database Management
ML & Data Science: scikit-learn, OpenCV, Pandas, NumPy, Computer Vision, Data Preprocessing, Classification
Tools & Systems: Git, Docker, VS Code, Streamlit, Arduino, IoT Systems

Projects

Vox – Text-to-Speech Application *Python / Text-to-Speech*

- Developed a text-to-speech application that converts typed or imported text into spoken audio, with language and speech-pace controls.
- Supports a browser-based application deployed on Vercel and an original Windows desktop application, extending access across web and desktop environments.
- Integrates Google Text-to-Speech for audio generation; an internet connection is required to generate speech.

Personality Prediction from Social Media Posts
Python / Machine Learning / NLP

- Proposed an ML-based system to predict personality types from social media posts using text preprocessing and natural language processing techniques.
- Aims to classify text into Myers–Briggs Type Indicator (MBTI) personality categories based on linguistic patterns and textual features.
- Planned workflow includes text preprocessing, feature extraction, model training, and evaluation for personality classification.
